

A lush garden pond with a small waterfall cascading over dark, mossy rocks. The water is calm, reflecting the surrounding greenery and the sky. Tall grasses and other plants are visible on the right side of the pond. The overall scene is peaceful and natural.

Simple Solutions Water Treatments

FOR PONDS, WATERFALLS, AND FOUNTAINS

When your pond water is dirty, you can't see your fish – and that's no fun! Not to mention, dirty water can be a symptom of an underlying water quality problem that can cause harm to your finned friends. One of our goals at Aquascape is to create a low-maintenance and joyful pond-keeping experience for you. 🌿

The first step in obtaining a naturally-balanced low-maintenance pond is to ensure you have proper filtration, circulation, and aeration. Aquascape ecosystem ponds all start with these basic components, along with the right amount of fish and plants, to create a healthy environment.

Access our e-book "[Pond Water](#)" to learn what you need to know about filtration, circulation, and aeration.

Once you have the right ingredients as the basis of your pond, your next step is to maintain a healthy level of beneficial bacteria that keeps your water clean and clear. Our “Simple Solutions” line of water treatments makes it easy to accomplish this goal! 🌿

EASY-TO-USE WATER TREATMENTS

Aquascape Simple Solutions water treatments are the easy way to keep water features clean, clear, and healthy. Maintain your water feature by tackling most water quality and clarity issues with our line of easy-to-use water treatments and products.

Choose between the electronic [Automatic Dosing System](#) or the manual pump-top bottles to dispense our specially-formulated water treatments. Four treatment options are available for ponds and two treatment options are available for fountains and waterfalls. 🌿

THE REVOLUTIONARY AUTOMATIC DOSING SYSTEM

Let's start with the easiest option for adding the proper blend of treatments to your pond. The Automatic Dosing System (ADS) is an electronically-operated dispenser that accurately and consistently applies your choice of specially-formulated water treatments to your water feature. This automatic dosing process eliminates the guesswork and routine associated with adding water treatments manually. You no longer need to remember to add beneficial bacteria or other elements to your pond. The Automatic Dosing System does it for you!

The [Automatic Dosing System](#) features a sturdy housing unit with an easy-to-use control panel that holds water treatment pouches and consistently dispenses the treatment into the water. You can adjust the level of treatment based on the number of gallons of water in your feature. The unit is extremely quiet, dependable, and maintains optimal water quality. 🌿

WATER TREATMENTS FOR PONDS

Four pond water treatment options are available to use with the Automatic Dosing System. They cover everything from adding beneficial bacteria, to protecting your fish against disease. Each treatment is available in a handy pouch and serves a specific purpose. All pond water treatments are safe for fish and plants.

1 Aquascape Maintain for Ponds combines our most effective pond water treatments into one powerful formulation to successfully keep ponds clean, clear, healthy, and maintenance-free. Maintain for Ponds contains a powerful blend of beneficial bacteria, phosphate binder, flocculent, and pond detoxifier. The bacteria blend includes lithotrophic, heterotrophic, and photosynthetic bacteria strains, keeping pond water healthy, beautiful, and safe for pond fish. The included phosphate binder locks up excess nutrients that could otherwise cause issues with water quality, and the flocculent quickly clears cloudy water by clumping suspended debris. A pond water detoxifier is added to the formulation to remove and detoxify chlorine, chloramine, heavy-metals, and other toxins, making your pond water safe for both fish and plants. This is the main treatment for your pond and the one you'll keep in your Automatic Dosing System, unless a problem arises. If a water issue occurs, replace Maintain for Ponds with one of the following three treatments. Once your water issue has cleared, return to using our Maintain treatment.

2 Aquascape Clean for Ponds quickly optimizes the quality and clarity of pond water while drastically reducing filter maintenance. Clean for Ponds uses a powerful blend of heterotrophic bacteria to naturally digest organic waste or sludge caused by uneaten fish food, fish waste, and decomposing leaves and debris. The high concentration of bacteria works to clean between rocks and gravel while keeping pond filters clean, including filter mats and biological filter media.

3 Aquascape Clear for Ponds contains a concentrated formulation of ingredients designed to eliminate unsightly water conditions, solving even the most stubborn water quality problems. The specialized formulation contains a blend of clarifiers designed to clear cloudy or discolored water and reduce debris that attaches to rocks and gravel. Clear for Ponds also contains a powerful phosphate binder to lock up excess nutrients that may otherwise cause water quality problems.

4 Aquascape Protect for Ponds uses an all-natural formulation of tea tree oil and other plant-based biopolymers to effectively protect pond fish. The special formulation effectively reduces fish stress, prevents parasites and bacterial infections, and accelerates the healing of superficial wounds, scrapes, cuts, and breeding abrasions. Protect for Ponds is great for use after handling fish, performing pond clean outs, or conducting water changes. The treatment will not discolor pond water and is safe for use with biological filters. 🌿

WATER TREATMENTS FOR WATERFALLS AND FOUNTAINS

Two water treatment options are available to use with fountains and waterfalls where no pond is present. Available in a convenient pouch for use with the Automatic Dosing System, these treatments keep your water feature clean and beautiful.

1 Aquascape Prevent for Fountains eliminates unsightly fountain and waterfall conditions to keep water features looking clean and clear while reducing maintenance. The treatment uses a special blend of clarifiers to clear and prevent debris and white-scale buildup in the water and on the surface of the fountain, rocks, or gravel. The formulation also works to prevent stains, foam, and other unsightly water conditions.

2 Aquascape Clean for Fountains effectively cleans and clarifies the water in fountains and waterfalls to keep the features looking their best while significantly reducing maintenance and issues with water quality. This special formulation is ideal for water features with standing water, including container water gardens and other features containing fish or plants. This water treatment contains a fast-acting flocculent and phosphate binder to help clump and clear suspended debris. Clean for Fountains also safely prevents and eliminates foam. 🌿

SIMPLE SOLUTIONS PUMP-TOP BOTTLES

All of the Simple Solutions pouch water treatments for the Automatic Dosing System are also available for dispensing from a pump-top bottle. Pump-top bottle water treatments come in 8 ounce, 16 ounce, and 32 ounce sizes. In addition, a one-gallon container is available for refilling the pouches or the pump-top bottles. 🌿

THE SIMPLE WAY TO ENJOY YOUR WATER FEATURE

The Aquascape Simple Solutions water treatments make it easier than ever to maintain and enjoy your water feature. You can choose to manually dispense them with pump-top bottles, or use the electronic Automatic Dosing System. Both options accurately and easily dose your choice of treatment when package instructions are followed.

You'll love "Living the Aquascape Lifestyle" with your clean and healthy pond, waterfall, or fountain! 🌿
