

Recreation Ponds – Natural Swimming

Natural Swimming is becoming more popular as people fully realise the cost and impact of installing and running a traditional pool balanced with the impact of constant water treatments with harsh chemicals for something enjoyed for 6 weeks of the year.

Recreation Ponds are designed to be enjoyed all year round. They enhance natural garden landscapes, encourage wildlife and will support fish as well. These are a pleasure to sit and socialise around and for entertaining family and guests.

They are designed just like our eco-system ponds that work with Mother Nature's principles for clear clean water supported by the Aquascape Upflow wetland filter. You can swim in clear clean water, your skin feels fresh and smooth and you do not need to shower off harmful chemicals

You don't need a huge area these ponds are for swimming, sitting in the water on a hot day, jumping in or just playing on a shallow beach with the grandchildren and dog. These are for fun and relaxation with the extra benefits that you have your own aquarium you can snorkel in, a year round water garden and wildlife haven and low maintenance in fresh water that is chlorine free.
